Lesson 1 - How search Works

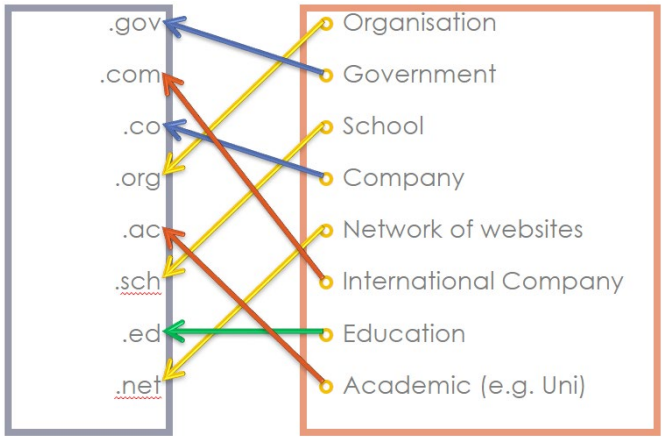
Search Engine: A search engine is a software system that is designed to carry out web searches.

Hyperlink: A hyperlink is what we use to move around the web from page to page. It could be a button, text or an image.

Search engines are programs that are designed to search the internet for us. They scour through all the billions of webpages, looking for information that matches what you are seeking. By using a search engine you can find information in seconds.

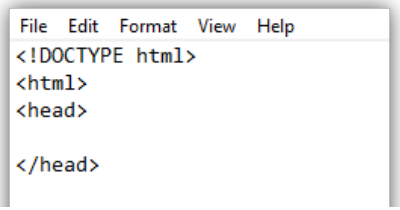
Lesson 2 – Understanding URL

URL stands for Uniform Resource Locator. This is the address of the website and will be unique. There are billions of websites on the World Wide Web, so it is important to type in the URL correctly.



Lesson 3 – Using HTML

Websites are made up of a Head and a Body
Head is not what you might think – It's not a heading on the page
Anything that you see on the page is put in the Body section
The Head section is information about the page not on it
Head can also be used to set



Topic 3 – I am a Website Developer

Questions

What is a search engine?

What are search engine results?

What is the world wide web?

What does a hyperlink do?

Name 3 HTML tags

Lesson 4 – Using HTML

Font Colours:

```
<body>

<H1> <font color=#FF0000>ALL ABOUT ME</H1>

<b><font color=#AA46CC>My First Web Page</b>
<i>this page is about me</i>

</body>
```

Align Text:

```
<body>

<H1 align="center"> <font color=#FF0000>ALL ABOUT

<b><font color=#AA46CC>My First Web Page</b>
<i>this page is about me</i>

</body>
```

Paragraphs: split the text up on your page using para

```
<body>

<H1 align="center"> <font color=#FF0000>ALL ABOUT

<b><font color=#AA46CC>My First Web Page</b>
<i>this page is about me</i>

<p>This is a paragraph of text that lets me put some website </p>

</body>
```
